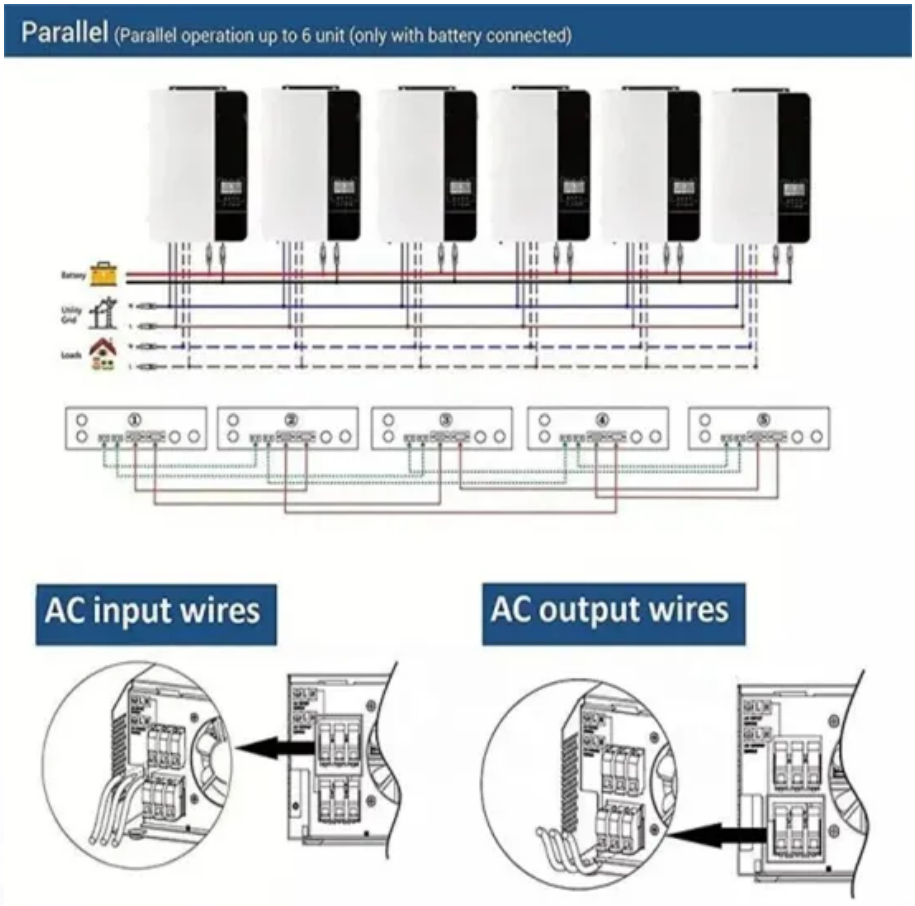
2025 Government Work solar Energy Storage



Overview

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

According to EIA’s latest Preliminary Monthly Electric Generator Inventory report, the U.S. power grid is expected to add 63 gigawatts (GW) of new utility-scale electric-generating capacity in 2025. Most of this growth will come from solar power and energy storage, showing strong momentum for clean.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025. In what is expected to be a pivotal year, the U.S. aims to add approximately 97 gigawatts (GW) of new electricity capacity, largely.
