# 5g AC DC power solution for base station power distribution

## Overview

---

What is 5G power supply?

The development of 5G networks brings new challenges for powering base stations. MPS has developed a powerful new power supply solution for 5G telecom applications that ensures stable and efficient power delivery, accurate current sensing, and highly efficient power factor correction to maintain a stable output voltage amid large load variations.

What are the components of a 5G base station?

Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes:.

Which MP's products are best for 5G?

Several innovative, high-performance MPS products, including the MPF32010, MCS180x family, MP18831, MPF32020, MP023 and MPQ27800 New 5G networks bring new challenges for powering base stations. MPS has developed a powerful, efficient new power supply solution for 5G telecom applications using several innovative products.

What is a small cell in 5G?

Small cells are a new part of the 5G platform that increase network capacity and speed, while also having a lower deployment cost than macrocells. The compact size of a small cell requires that all components – especially power converters – provide high efficiency, better thermals and eventually the best power density possible.

What is a base station power supply?

This acts as the “blood supply” of the base station, ensuring uninterrupted

power. It includes: AC distribution box: Distributes mains power and offers surge protection. Switch-mode power supply: Converts and stabilizes power while managing DC output. Battery banks: Serve as backup power to keep systems running during outages. 3.

Do das increase network capacity?

DASs take a signal from the base station and boost it to increase the area the signal can reach. While DASs are great for increasing coverage, they do not increase network capacity; the only way to increase network capacity is to add more base stations, which is why small cells are so useful.
