ASEAN Energy Storage Backup Power

Overview

Does ASEAN need energy storage?

The ASEAN bloc has set the targets of 23% renewable energy in its Total Primary Energy Supply (TPES) and 35% renewable energy in ASEAN installed power capacity by 2025. This means that energy storage is required. Additionally, without BESS acceptance on a larger level, the needed funds won't materialise, and fewer BESS will be built.

How can the ASEAN Power Grid facilitate investments in renewables?

To facilitate investments in renewables in ASEAN, it is critical to overcoming the barriers in renewable energy legislation, energy governance, and business environment. 28 Cooperation through the ASEAN Power Grid brings economic benefits to the region as a whole, and thus improves the affordability for energy transition.

Does ASEAN have technology options to decarbonize power sector?

Faced with energy transition objectives, the ten countries of the Association of Southeast Asian Nations (ASEAN) have technology options to decarbonize power sector. This study investigates the hypothetical decarbonization pathways for ASEAN's power sector.

How is ASEAN viewed as a power system?

Each ASEAN country is viewed as a power system with country-specific electricity demand and emission targets required by its NDC.

What is the integrated power system capacity expansion model for ASEAN?

Here, we present an integrated power system capacity expansion model for ASEAN over 2018–2050. The results identify different pathways by strategically pursuing renewable energy, carbon capture and sequestration, and cross-border transmission.

Why does Southeast Asia need flexible energy storage solutions?

Southeast Asia's exponential growth in electricity demand, averaging over 6% annually over the past two decades, has created an urgent need for reliable and flexible energy storage solutions. This surge in demand is primarily driven by increasing ownership of household appliances and rising consumption of goods and services across the region.
