Asia Green Energy Storage Project Construction Plan

Overview

What is China energy construction in Southeast Asia?

As another masterpiece of China Energy Construction in Southeast Asia, the Terra PV storage project will make full use of the abundant local solar energy resources to provide a stable power supply of no less than 84 hours a week and 600 MW through the joint operation of photovoltaic power plants and energy storage systems.

What is China Energy Construction - Terra photovoltaic storage project?

Recently, China Energy Construction Co., Ltd. has made another major breakthrough in the international new energy market, and successfully signed the largest EPC (design, procurement, construction) project of integrated photovoltaic and storage power station in Southeast Asia with Manila Electric Power Company - Terra photovoltaic storage project.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Does ASEAN need energy storage?

The ASEAN bloc has set the targets of 23% renewable energy in its Total Primary Energy Supply (TPES) and 35% renewable energy in ASEAN installed power capacity by 2025. This means that energy storage is required. Additionally, without BESS acceptance on a larger level, the needed funds won't materialise, and fewer BESS will be built.

How big is China's energy storage capacity?

According to CNESA data, the capacity of independent energy storage stations

planned or under construction in China in the first half of 2022 was 45.3GW, accounting for over 80% of all new energy storage projects planned or under construction.

Where is the Terra photovoltaic storage project located?

It is understood that the Terra photovoltaic storage project is located in the new Ecija province, 100 kilometers north of Manila, with a total scale of 3.5GW photovoltaic + 4.5GWh energy storage, of which the first phase of the western project includes 1.4GW photovoltaic + 3.3GWh energy storage.
