

## Kongres Container

# Cambodia uses 17 strings of 60v lithium battery pack

CE UN38.3 

## Overview

---

What are the different types of lithium battery packs?

Lithium battery series and parallel: There are both parallel and series combinations in the middle of the battery pack, which increases the voltage and increases the capacity. Such as 4000mAh, 6000mAh, 8000mAh, 5Ah, 10Ah, 20Ah, 30Ah, 50Ah, 100Ah and so on. Take 48V 20Ah lithium battery pack as an example Lithium Battery PACK.

Why is a lithium battery a series battery?

Due to the limited voltage and capacity of single batteries, series and parallel combinations are required in actual use to obtain higher voltage and capacity in order to meet the actual power supply needs of the equipment. Lithium battery in series: the voltage is added, the capacity remains the same, and the internal resistance increases.

What batteries are included in the battery library?

The library includes information on a number of batteries, including Samsung (ICR18650-30B, INR18650-25R), Sony (US18650GR, US18650VTC6), LG (LGABHG21865, LGDBMJ11865), Panasonic (UR18650NSX, NCR18650B), and many more. Max. Cell Voltage (V): Pack Max. Voltage: 14.40 V Max. Discharge Current: 0.55 A.

Why are parallel lithium strings important?

Since lithium cells must be managed on a cell level, parallel lithium strings dramatically increase the complexity and cost of the battery management and introduce many additional points of failure and failure modes not found with a single string.

Why is there a power shortage in Cambodia?

Cambodia is a tropical country in Southeast Asia with extreme heat waves sweeping across the country during the dry season. This results in the lack of

hydropower which causes power shortages in Cambodia. Power shortages during the dry season shortens the lifespan of lead-acid batteries, which may lead to network availability issues.
