# Can ASEAN outdoor power supply pass

## Overview

---

The ASEAN Power Grid (APG) is a key initiative under the ASEAN Vision 2020 and has the goal of achieving regional interconnection for , accessibility, affordability and . The APG is a regional power interconnection initiative aiming to connect the electricity infrastructure of the member states of the .

Delivering the ASEAN Power Grid's full potential, as outlined in its ambitious cross-border targets, will require not only regional coordination but also significant and innovative financing mechanisms.

Delivering the ASEAN Power Grid's full potential, as outlined in its ambitious cross-border targets, will require not only regional coordination but also significant and innovative financing mechanisms.

The ASEAN Power Grid (APG) is a flagship initiative under the ASEAN Plan of Action for Energy Cooperation (APAEC) aimed at enhancing energy security, sustainability, and economic integration across Southeast Asia. It envisions a network of cross-border power interconnections that enable electricity.

By accelerating the energy transition, ASEAN's gross domestic product is expected to be higher by an average of 2.6 per cent annually between 2023 and 2050, translating into a cumulative gain of US\$4.8 trillion. Also, by 2050, renewable energy could create 4.6 million out of 14.3 million energy.

Dhana Raj Markandu was interviewed by BFM89.9 on 3 Jun 2025 The ASEAN Power Grid (APG) was first mooted in 1997 to establish regional energy security and connectivity. Recent years have seen greater traction for the initiative in tandem with the growth of renewable energy and decarbonisation.

A map of Southeast Asia, depicting existing and proposed electric power connections for a unified ASEAN Power Grid from 2011. The ASEAN Power Grid (APG) is a key initiative under the ASEAN Vision 2020 and has the goal of achieving regional interconnection for energy security, accessibility.

The IEA and ASEAN Centre for Energy scenarios forecast that solar and wind will account for between twenty-three and twenty-five percent of the power supply by 2030, a significant growth compared to the four percent mix in

2023. To realize this transition, grid infrastructure must evolve and become.

Grid is the driver to unlock solar and wind markets and provide opportunities for fossil-dependent countries to be renewables exporters. This report summarises emerging challenges facing ASEAN in managing the grids and interconnections. It provides recommendations based on examples from Europe and. Will ASEAN Power Grid integration boost energy security?

At the ASEAN Summit May 26, 2025 national leaders adopted a bold plan for ASEAN power grid integration to boost energy security and achieve sustainable growth.

Does ASEAN need modern interconnected grids?

The ASEAN needs modern interconnected grids that will support renewable energy generation in ensuring power security, according to Ember.

How can ASEAN achieve its energy transition?

Therefore, ASEAN's energy transition hinges not just on ambition, but on infrastructure. Grid development is the connective tissue that will allow clean power to scale, flow, and deliver on its promise. The region should treat the grid as the foundation of a modern, prosperous and decarbonized energy system.

When will the ASEAN Power Grid be fully established?

The ASEAN Power Grid, including all the transmission interconnection projects, is expected to be fully established by 2045, underscoring the urgency of addressing key challenges related to regional grid planning.

Will ASEAN become more electrified?

As ASEAN is slated to become more electrified, managing the demand has the potential to become a large source of flexibility. Strengthening and expanding grid interconnections across ASEAN is vital to scale up renewable energy while improving grid efficiency.

Will ASEAN's Grid investments align with the evolving energy landscape?

Ultimately, aligning grid investments with the evolving energy landscape will be key to ASEAN's transition toward a more sustainable, efficient and competitive power system. This study assesses the gap between ASEAN's

projected power demand and the required renewable energy capacity to align with net-zero targets.
