Canada solar power home wind power

Overview

How many wind and solar energy resources are there in Canada?

Canada has only begun to scratch the surface of its vast and untapped wind and solar energy resources. At the end of 2024, we had 24 GW of wind energy, solar energy and energy storage installed capacity across Canada. For more information on the current state of the industry, growth and forecasts, see CanREA's most recent annual data release:.

How much solar power does Canada have?

Canada's total wind, solar and storage installed capacity grew 46% in the past 5 years (2019-2024), including nearly 5 GW of new wind, 2 GW of new utility-scale solar, 600 MW of new on-site solar, and 200 MW of new energy storage.

Is solar and wind technology a real thing in Canada?

Solar and Wind technology just isn't there yet. The same old myths continuously creep into headlines, articles and conversations about renewable energy in Canada. The wind and solar power resources in Canada are incredible.

How much solar energy will Canada have in the next 5 years?

Solar energy capacity increased by 92% in that 5 year period. Canada is estimated to install at least 10 GW of new wind, solar, and storage capacity by 2030.

Are solar panels a good option for Canada?

Other countries having a better renewable energy potential should not take away from the clean energy capabilities of Canada. Solar panels may work better in central Africa than Canada, but that is irrelevant - they are still viable here and service Canada's need for clean energy. Save money. Become independent. Protect the environment.

Is Canada a good place for wind power?

As a top 10 global leader in wind power production, Canada is on the right track. Similar to solar resource potential, southern Alberta and Saskatchewan are ideal locations for renewable energy development. Coastlines as well as much of the maritime provinces have incredible wind power potential as well. How Does Canada Compare?
