

## Kongres Container

# Company s energy storage fire protection system

## Overview

---

The fire protection system design of our ATESS energy storage container is built on comprehensive compliance, structured around three core pillars: fire protection components, suppression systems, and integrated control. How can battery energy storage improve fire safety?

Battery energy storage is revolutionizing power grids, but fire safety remains a critical challenge. Advanced fire detection and suppression technologies, including immersion cooling, are making BESS safer by preventing thermal runaway and minimizing risks.

Which energy storage projects are NFPA compliant?

In 2018, the first energy storage project to apply active combustible gas detection to NFPA standards. In 2018, the first energy storage project to apply self-developed suppression tube fire extinguishing products to NFPA standards.

How can a battery management system prevent a fire?

Using battery management systems (BMS), predictive analytics, and strict quality standards can minimize fire hazards and ensure safe, reliable energy storage. Battery fires in energy storage systems can cause severe infrastructure damage, toxic gas emissions, and rapid fire spread, making early detection and suppression critical.

Can water-based fire suppression be used in large-scale energy storage facilities?

This hybrid approach is particularly useful in large-scale energy storage facilities, where electrical safety is a top concern. While water-based suppression is effective for temperature control, it is often used alongside other fire suppression methods for full containment of lithium-ion battery fires.

Which fire suppression methods are used in enclosed battery storage

systems?

Gas and aerosol-based fire suppression methods are widely used in enclosed battery storage systems, where eliminating oxygen or chemically neutralizing flames is a viable strategy. These suppression technologies are particularly effective because they leave no residue, minimizing damage to sensitive electrical components.

Which energy storage projects have won NFPA certifications in 2021?

In 2021, won the Best Fire Safety Solution Award in China's Energy Storage Industry In 2022, the first energy storage project to mass apply explosion-proof plate design to NFPA standards In 2023, Gaogong Energy Storage - New Product Innovation Award In 2024, Changzhou Smart Manufacturing Factory was officially completed and launched (IATF16949)
