Construction of new energy storage facilities

Overview

Where will a battery energy storage system be built in New York?

The New York State Public Service Commission (PSC) gave its approval earlier this month for the battery energy storage system (BESS) to be built in Brookhaven, a town in New York's Suffolk County by Holtsville Energy Storage.

How many mw can a New York battery storage facility hold?

When built, the facility will be able to hold up to 100 megawatts (MW) and power over tens of thousands of households. Once completed, the project will be amongst the largest battery storage installations in New York State.

When will energy storage projects be regulated?

The storage industry anticipates this to be passed into law in 2022, and that it will apply to projects that achieved commercial operation after December 31, 2020, reducing the risks and uncertainty in energy storage project economics.

What is nycida's largest battery energy storage project?

NYCIDA closed its largest battery energy storage project to date, the East River Energy Storage Project, located on an industrial site on the East River in Astoria, Queens. When built, the facility will be able to hold up to 100 megawatts (MW) and power over tens of thousands of households.

Why are energy storage systems being added to the grid?

Historic amounts of energy storage, primarily lithium-ion battery systems, are being added to the U.S. grid, driven by a need to balance renewable generation and to meet load growth, including from data centers.

How much do energy storage incentives cost in New York?

These incentives decline each calendar year and are set at \$90 per kWh for year 2021. Bulk energy storage incentives are applicable to ESS projects between 5 and 20 MW in capacity and are available through the New York State Energy Research and Development Authority (NYSERDA).
