Cook Islands Energy Storage Project

Overview

How much energy does the Cook Islands use?

The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation.

What does the GCF grant mean for the Cook Islands?

The GCF is providing a \$12-million grant to co-finance the project, which is part of the seven-year Pacific Islands Renewable Investment Program covering the Federated States of Micronesia, the Marshall Islands, Nauru, Papua New Guinea, Samoa, and Tonga. The grant will fund assistance to the Cook Islands in procuring and installing battery storage.

How much battery storage capacity will be installed in Rarotonga?

Additional battery storage capacity consisting of 1 megawatt (MW)/4 megawatt hour (MWH) for grid stability will be installed in the diesel power station in Avatiu Valley, Rarotonga, and 2 MW/8 MWh for load-shifting capability will be installed at the Rarotonga International Airport.
