Cuba New Energy Experience European Station

Overview

Is Cuba's energy infrastructure in a precarious state of aging and disrepair?

The report highlights the issue that not only is Cuba's energy infrastructure in a precarious state of aging and disrepair, but also that its entire energy system relies heavily on external aid and imported fossil fuels.

What type of energy is used in Cuba?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important energy source in lower-income settings. Cuba: How much of the country's energy comes from nuclear power?

.

How much of Cuba's energy is renewable?

The government set a goal of deriving 37 percent of Cuba's energy from renewable sources by 2030; so far they've reached only 3 percent. Cuba is actively looking to partner internationally on energy initiatives. Agreements with Russia primarily focus on modernizing existing thermal facilities and possibly constructing new ones.

How much energy will Cuba generate by 2025?

In 2019, Cuba signed an agreement with the United Nations for Project 180087, committing to generate 29% of its energy from renewable sources by 2025. The project was scheduled to conclude on June 30, 2023, with a budget of \$3.4 million. The Cuban state forecasts generating 30,000 GWh by 2030, an almost unattainable goal.

Should Cuba update its energy grid?

While small-scale, such renewable energy initiatives can reduce pressure on

the energy grid and provide relief in especially vulnerable places. Due to rising temperatures and increasingly unreliable energy infrastructure, action to update Cuba's energy grid is urgently necessary.

Why has Cuba's energy grid collapsed four times in the last 6 months?

On top of that, Cuba's entire grid has collapsed four times in the last six months. The problem stems from years of neglect of Cuba's energy infrastructure, exacerbated by constrained access to foreign capital and a failure to adapt to new energy options.
