# Cuban solar factory produces solar panels

## Overview

---

Thinking of solar manufacturing in Cuba?

Our expert guide covers the critical infrastructure risks, from power stability to logistics, and offers proven solutions.

Thinking of solar manufacturing in Cuba?

Our expert guide covers the critical infrastructure risks, from power stability to logistics, and offers proven solutions.

An entrepreneur preparing to launch a solar module factory envisions a state-of-the-art production line, smoothly assembling panels destined to power the nation. But the reality often begins with a far more fundamental challenge. Imagine a factory manager receiving a call at 3 AM: the power grid.

HAVANA TIMES – The same Chinese company that designed the Soyea decoder box models for Cuba’s failed digital television project is now one of the suppliers of panels used in the photovoltaic development program with which the Government intends to resolve the island’s electricity crisis. That.

The Cabaiguán photovoltaic park, with a capacity of 21.87 MW, located in the central province of Sancti Spíritus, began operations after just over two months of installation. This is part of Cuba’s national plan that calls for the construction of 55 solar parks by 2025, each with a capacity of 21.8.

Cuba is facing a serious energy crisis with prolonged blackouts, while UNE promotes solar parks. Only 6 out of 15 thermoelectric plants are operational, and renewable energy accounts for less than 5% of the total energy supply. Amid an unprecedented energy crisis, the Electric Union of Cuba (UNE).

With his pair of panels, Cancell has 24/7 power for his refrigerator, lights, fans, television, stereo, etc. Considered by some to be a “firefly” with 4.5 kW per day, during the days when the National Electric Power System has collapsed, many neighbors have benefited from the solidarity services.
