Dimensions of an 80W solar panel

Overview

Generally speaking, most 80w solar panels have dimensions in the ballpark of around 3.3 feet (1 meter) in length and 2 feet (0.6 meters) in width. The thickness is usually quite thin, often around 1 - 2 inches (2.5 - 5 centimeters).

Generally speaking, most 80w solar panels have dimensions in the ballpark of around 3.3 feet (1 meter) in length and 2 feet (0.6 meters) in width. The thickness is usually quite thin, often around 1 - 2 inches (2.5 - 5 centimeters).

You can find typical dimensions of 100W, 150W, 170W, 200W, 200W, 220W, 300W, 350W, 400W, and 500W solar panels summarized in the chart below. But, just to emphasize the problem, let's have a look at how the standard solar panel sizes are usually explained. They are not expressed as dimensions for.

Now, the dimensions of an 80w solar panel can vary depending on the manufacturer, the type of solar cells used (like monocrystalline or polycrystalline), and the panel's design. Generally speaking, most 80w solar panels have dimensions in the ballpark of around 3.3 feet (1 meter) in length and 2.

Our range of solar panels are constructed from ultra-efficient polycrystalline and have been designed to provide a reliable and cost-effective alternative energy solution for applications where mains power is either not available, or not desirable.

Panel "Size" vs Physical Dimensions: The most critical distinction for homeowners is that solar panel "size" refers to electrical output (measured in watts), not physical measurements. A 400W panel has the same physical footprint whether it produces 350W or 450W - the difference lies in cell.

Technical parameter Maximum Power(W) 80W Optimum Power Voltage(Vmp) 15.90V Optimum Operating Current(Imp) 5.03A Open Circuit Voltage(Voc) 18.58V Short Circuit Current(Isc) 5.59A Mechanical Characteristics Cell Type Monocrystalline 125x125mm (5 inch) No of Cell 36 (4x9pcs) Dimensions 906x670x35mm.
