# Do solar use solar panels

## Overview

---

Solar panels convert sunlight into electricity. They use photovoltaic cells for this. Understanding how solar panels work is essential as they become more common in homes. These panels are changing how we think about energy. They offer a clean, renewable power source.

Solar panels convert sunlight into electricity. They use photovoltaic cells for this. Understanding how solar panels work is essential as they become more common in homes. These panels are changing how we think about energy. They offer a clean, renewable power source.

You probably already know that solar panels use the sun's energy to generate clean, usable electricity. But have you ever wondered how they do it?

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity.

At their core, solar panels are made of photovoltaic (PV) cells. These cells are the key component that converts sunlight into electricity. Most solar panels use silicon, a natural element found in sand, as the main material for these cells. Silicon is popular because it's efficient at absorbing.

Solar panels convert sunlight into electricity. They use photovoltaic cells for this. Understanding how solar panels work is essential as they become more common in homes. These panels are changing how we think about energy. They offer a clean, renewable power source. This helps reduce our carbon.
