

## Kongres Container

# Double glass component

## Overview

---

The maximum insulating efficiency of a standard IGU is determined by the thickness of the space. Greater space increases the insulation value up to a point, but eventually with a large enough gap, convection currents begin to flow carrying heat between the panes within the unit. Typically, most sealed units achieve maximum insulating values using a space of 16–19 mm (0.63–0.75 in.).
