

## Kongres Container

# Energy storage container access to high voltage level

## Overview

---

How much power does an energy storage container need?

Normal lighting requires a 380/220V power input. Evacuation signs with batteries are provided at exits. 3.8.4.2 Energy storage containers should use rock wool materials for thermal insulation design, featuring insulated wall panels, doors, floor, and roof to prevent the formation of thermal bridges that cause excessive heat loss.

How does the energy storage system work?

These components work together to ensure the safe and efficient operation of the container. The capacity of cell is 306Ah, 2P52S cells integrated in one module, 8 modules integrated into one rack, 5 racks integrated into one container. As the core of the energy storage system, the battery releases and stores energy.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

What is ENERC+ energy storage?

The EnerC+ Energy Storage product is capable of various on-grid applications, such as frequency regulation, voltage support, arbitrage, peak shaving and valley filling, and demand response. In addition, EnerC+ container can also be used in black start, backup energy, congestion management, microgrid or other off-grid scenarios.

What are the advantages of ENERC+ container?

2) New generation Cell. EnerC+ container integrates the LFP 306Ah cells from

CATL, with more capacity, slow degradation, longer service life and higher efficiency. 3) High integrated. The cell to pack and modular design will increase significantly the energy density of the same area.

How BMS is used in energy storage system?

BMS is used in energy storage system, which can monitor the battery voltage, current, temperature, managing energy absorption and release, thermal management, low voltage power supply, high voltage security monitoring, fault diagnosis and management, external communication with EMS and ensure the stable operation of the energy storage system.
