# Energy storage lithium-ion battery industry

## Overview

---

The global Lithium-Ion Battery Energy Storage System (BESS) market is experiencing robust growth, projected to reach \$4205 million in 2025 and maintain a Compound Annual Growth Rate (CAGR) of 24% from 2025 to 2033. This expansion is fueled by several key drivers.

The global Lithium-Ion Battery Energy Storage System (BESS) market is experiencing robust growth, projected to reach \$4205 million in 2025 and maintain a Compound Annual Growth Rate (CAGR) of 24% from 2025 to 2033. This expansion is fueled by several key drivers.

Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide range of consumer goods, the demand for energy storage batteries has increased considerably from 2000 through 2024. Energy storage batteries are manufactured devices that accept, store, and discharge electrical.

But a 2022 analysis by the McKinsey Battery Insights team projects that the entire lithium-ion (Li-ion) battery chain, from mining through recycling, could grow by over 30 percent annually from 2022 to 2030, when it would reach a value of more than \$400 billion and a market size of 4.7 TWh. 1.

Lithium-Ion Battery Energy Storage System by Application (Residential, Utility & Commercial), by Types (On-Grid, Off-Grid), by North America (United States, Canada, Mexico), by South America (Brazil, Argentina, Rest of South America), by Europe (United Kingdom, Germany, France, Italy, Spain).

Developments in batteries and other energy storage technology have accelerated to a seemingly head-spinning pace recently — even for the scientists, investors, and business leaders at the forefront of the industry. After all, just two decades ago, batteries were widely believed to be destined for.
