# Fire protection requirements for energy storage battery warehouses

## Overview

---

Core requirements include rack separation limits, a Hazard Mitigation Analysis to prevent thermal-runaway cascades, early-acting fire suppression and gas detection, stored-energy caps for occupied buildings, and detailed safety documentation (UL).

Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions. While BESS technology is designed to bolster grid reliability, lithium battery fires at some.

NFPA 855 is the leading fire-safety standard for stationary energy-storage systems. It is increasingly being adopted in model fire codes and by authorities having jurisdiction (AHJs), making early compliance important for approvals, insurance, and market access. Core requirements include rack.

This is where the National Fire Protection Association (NFPA) 855 comes in. NFPA 855 is a standard that addresses the safety of energy storage systems with a particular focus on fire protection and prevention. In this blog post, we'll dive into what NFPA 855 is, why it's important, and the key.

Working on a battery should always be considered energized electrical work. NFPA 70E®, Standard for Electrical Safety in the Workplace®, Chapter 3 covers special electrical equipment in the workplace and modifies the general requirements of Chapter 1. The chapter covers the additional safety-related.

If your team installs or works near battery energy storage systems (BESS), a new fire safety standard is going to affect how those systems get designed, approved, and built. The 2026 edition of NFPA 855, the Standard for the Installation of Stationary Energy Storage Systems, is now live. Released.

Fire codes and standards inform ESS design and installation and serve as a backstop to protect homes, families, commercial facilities, and personnel, including our solar-plus-storage businesses. Code-making panels develop these codes and standards with two primary goals in mind: (1) reducing the.
