Grid-connected 2kw inverter

Overview

What is grid tie power inverter?

The grid tie power inverter is the most efficiency and technologically advanced inverter for solar power system. Grid Tie Inverter with Limiter Sensor. Delivers only the power needed by the load. Big LCD display, all adjustable parameter. Improving the efficiency of the entire solar power system-- Because of MPPT function.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.

What is a ginlong gci-2k grid tie inverter?

Maximise your output and minimise your payback period with a Ginlong GCI inverter today. Every month, there are more than 5 mege watts of photovoltaic and wind turbine applications choose GCI-2K grid tie inverter as power solution. With its unique technology, GCI-2K brings customers widest input voltage range at its class from 30V up to 750V.

What is gci-2k inverter?

With its unique technology, GCI-2K brings customers widest input voltage range at its class from 30V up to 750V. This inverter is also certified to UL 1741, AS 4777, G83/1 and other related international standards. Grid tie inverter is one of the crucial parts in the PV system and wind turbine system to feed the electricity to the public grid.

Can a grid connected inverter be left unattended?

Do not leave the design powered when unattended. Grid connected inverters (GCI) are commonly used in applications such as photovoltaic inverters to

generate a regulated AC current to feed into the grid. The control design of this type of inverter may be challenging as several algorithms are required to run the inverter.

How do I check if a ti inverter is grid connected?

TI recommends to use a controlled source at the output, such as an AC power supply to verify grid connected operation. Once the operation is verified, check the functioning of the inverter with direct grid connection. Bias supply to the board is provided by an isolated 15-V supply connected to J2 and S1 in the ON position. Figure 32.
