

## Kongres Container

# Haiti solar panel power generation efficiency

## Overview

---

The average output potential is 4.2 kWh/kWp daily and 1533.6 kWh/kWp yearly, demonstrating strong efficiency for solar photovoltaic installations. 2 Limited electricity supply: According to the World Bank report, only 49% of Haiti's population has access to electricity.

The average output potential is 4.2 kWh/kWp daily and 1533.6 kWh/kWp yearly, demonstrating strong efficiency for solar photovoltaic installations. 2 Limited electricity supply: According to the World Bank report, only 49% of Haiti's population has access to electricity.

The 2023 Energy Report Card (ERC) for Haiti provides a standardized overview of energy sector performance across 16 Caribbean countries. It highlights key indicators such as: The 2023 Energy Report Card for Haiti also includes data and insights on energy policies and regulations, workforce.

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels. The government is exploring various.

Sunshine Duration: Haiti receives an average of 3,103 hours of sunshine annually, equivalent to 8.5 hours per day. 1 Direct Normal Irradiation (DNI): Haiti receives an average Direct Normal Irradiation of 4.8 kWh/m<sup>2</sup> daily and 1752.8 kWh/m<sup>2</sup> yearly, indicating strong potential for solar energy.

The objectives of this module are to provide an overview and key tools and resources for understanding: •What is the market potential for off-grid solar in Haiti?

(Go to section) •What is the regulatory and policy framework for off-grid solar in Haiti?

(Go to section) 4 What is the market.

Haiti's struggle with severe fuel shortages and an unstable grid has sparked a

wave of innovative approaches aimed at expanding energy access through decentralized renewable energy (DRE), particularly through off-grid solar networks. These solutions are providing a vital lifeline to communities.

The answer is clear: The collaboration between ZL and Build Health International (BHI)— to replace and improve the solar panels atop Hôpital Universitaire de Mirebalais (HUM) —is key to energy self-sufficiency at the site, allowing for a stable, reliable source of electricity. The project will lead.
