Heishan Energy Storage Fire Fighting System Manufacturer

Overview

Are self-developed fire extinguishing systems NFPA compliant?

In 2018, the first energy storage project to apply self-developed suppression tube fire extinguishing products to NFPA standards In 2019, the first energy storage project to apply self-developed active air intake and exhaust systems to NFPA standards.

What is the largest energy storage project in China?

In 2019, the NFPA standard energy storage project (652MW) provided the largest single ESS project at that time In 2021, an EN standard energy storage project (1.3GW) was provided, which was the largest single ESS project at the time In 2021, won the Best Fire Safety Solution Award in China's Energy Storage Industry.

Which energy storage projects are NFPA compliant?

In 2018, the first energy storage project to apply active combustible gas detection to NFPA standards In 2018, the first energy storage project to apply self-developed suppression tube fire extinguishing products to NFPA standards.

Which energy storage projects have won NFPA certifications in 2021?

In 2021, won the Best Fire Safety Solution Award in China's Energy Storage Industry In 2022, the first energy storage project to mass apply explosion-proof plate design to NFPA standards In 2023, Gaogong Energy Storage - New Product Innovation Award In 2024, Changzhou Smart Manufacturing Factory was officially completed and launched (IATF16949).

How does a fire protection system work?

In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions. As its name implies - "aspirated" smoke and off-gas

detection systems use an "aspirator" mounted in a detector unit.
