How much does a household energy storage battery cost in Hungary

Overview

The current average selling price of residential battery storage, in the second half of 2025, came in at EUR 711 per kWh. It is 46.6% lower than in the first half of 2023. How will Hungary's subsidy scheme affect battery energy storage?

The Hungary panel discussion at the event. Image: Solar Media. Hungary's subsidy scheme for energy storage will drive huge growth in battery energy storage system (BESS) deployments over the next few years.

Is Hungary a good market for energy storage subsidies?

Moderator Nikita Chandrashekar, director at advisory Augusta & Co, said the scheme made Hungary an attractive market: "It is probably one of the most advanced subsidies schemes to bring energy storage forward. So from a revenue perspective, perhaps, unlike some other markets, the business case in Hungary seems pretty well developed."

How much does a household battery cost?

Household batteries typically cost anywhere from \$4000 for a smaller 4 to 5kWh battery up to \$15,000 for a larger 10 to 15kWh battery, depending on the type of battery, installation location, backup power requirements and type of hybrid inverter used. On average, energy storage batteries cost around \$1000 per kWh installed.

How much power does Hungary have?

Hungary has 40MWh of grid-scale BESS online today but that will jump 3,400% to around 1,300MWh over the next few years thanks to opex and capex support from the government, said Pálma Szolnoki, senior research associate at trade body the Hungarian Battery Alliance.

Which battery system is best for home energy storage?

All-in-one battery energy storage system (BESS) - These compact, all-in-one

systems are generally the most cost-effective option and contain an inverter, chargers and solar connection in one complete unit. Modular DC Battery System - Hybrid inverters for home energy storage are connected to a separate, modular DC battery system.

When did home storage batteries come out?

Large companies such as LG and Samsung began releasing lithium battery systems in 2015, but interest rapidly increased with the announcement of the Tesla Powerwall; this was when home storage batteries hit the mainstream.
