# How to match solar panels with energy storage cabinets

## Overview

---

Should you pair solar panels with a battery storage system?

That's the beauty of pairing solar panels with a battery storage system. It brings you closer to true 24/7 energy independence. So, whether you want to cut utility costs, live off-grid, or just need backup during power outages, this blog is here to help.

How do solar panels & battery storage work?

Solar panels help you generate power. Battery storage helps you keep that power for use when the sun isn't shining. The combo?

A 24/7 personal energy ecosystem. Let's start at square one. How do solar panels work?

They absorb sunlight and turn it into electricity (called DC power). An inverter then converts it into AC power for your home.

How to connect solar panels?

The other system components, such as a charge controller, battery, and inverter. There are two main types of connecting solar panels – in series or in parallel. You connect solar panels in series when you want to get a higher voltage. If you, however, need to get higher current, you should connect your panels in parallel.

Why do we put solar panels together?

We put solar panels together to increase the solar-generated power. Connecting more than one solar panel in series, in parallel or in a mixed-mode is an effective and easy way not only to build a cost-effective solar panel system but also helps us add more solar panels in the future to meet our increasing daily needs for electricity.

Can you connect different solar panels in a solar array?

Connect in parallel panels of different brands and of the same voltage. Connecting different solar panels in a solar array is not recommended since either the voltage or the current might get reduced. This leads to lower output power, and hence to less solar-generated electricity.

Can I connect more than one solar panel?

Connecting more than one solar panel in series, in parallel or in a mixed-mode is an effective and easy way not only to build a cost-effective solar panel system but also helps us add more solar panels in the future to meet our increasing daily needs for electricity. How to connect your solar panels depends on:
