

## Overview

---

What is a Huawei hybrid inverter?

A Huawei hybrid inverter is a type of inverter that converts solar energy (DC) into grid power (AC) and also supports battery storage for storing excess energy. What do I need before starting?

Which models does this step-by-step guide apply to?

.

Do hybrid inverters have a transfer switch?

Many hybrid inverters like the DEYE All in one hybrids do have a transfer switch built inside them. My Schneider does as well. When the grid is up, this transfer switch connects the grid into the system to allow you to pull grid power or export power back to the grid just like your old grid tied inverter.

Can a Deye hybrid inverter power everything?

But when it detects a grid issue it disconnects. If you have a wa to wire the DEYE hybrid inverter between the utility meter and your existing main circuit breaker panel, then you can have the hybrid inverter power everything in your house. The DEYE Sun 15K units appear to have a 150 amp transfer relay. But that unit uses a high voltage battery.

What hybrid models are compatible with Huawei?

This guide applies to Huawei's widely used hybrid models, including the SUN2000L, SUN2000-M1, SUN2000-M2 (not compatible with batteries), and the SUN2000- (3K-6K)-LB0, MAP0, and MB0 series. Do I need to register with Huawei?

Yes. A FusionSolar account is required to complete the installation and connect the inverter to the monitoring portal.
