# Huijue Sodium Ion Energy Storage Power Station

**LPR Series 19'  
Rack Mounted**

## Overview

---

The energy storage station uses the latest high-capacity sodium-ion batteries with a top response speed six times faster than other existing sodium-ion batteries. It can store 800,000 kWh of electricity per day, which can be used by 270,000 households.

The energy storage station uses the latest high-capacity sodium-ion batteries with a top response speed six times faster than other existing sodium-ion batteries. It can store 800,000 kWh of electricity per day, which can be used by 270,000 households.

Right at a very iconic phase in China's new energy development, the very first hybrid power station—to possibly the first in China—using sodium-ion batteries with lithium-ion batteries was put into working. This innovation thus actually opens up a new chapter in energy storage technology.

Unlike their lithium counterparts, sodium-ion systems leverage abundant resources (2.6% sodium in Earth's crust) with a unique "rocking-chair" ion mechanism. Recent breakthroughs in Prussian white cathodes demonstrate 160 mAh/g specific capacity - that's comparable to early lithium iron phosphate.

Battery energy storage systems (BESS) are in a way medium for bringing in an energy supply. They ensure a smooth power supply, ranging from demand to supply side, along with the grid integration of renewable energy sources, particularly wind and solar. Among different battery technologies.

Huijue Group's energy storage solutions (30 kWh to 30 MWh) cover cost management, backup power, and microgrids. To cope with the problem of no or difficult grid access for base stations, and in line with the policy trend of energy saving and emission reduction, Huijue Group has launched an.

The emerging sodium-ion battery technology, using Earth's 6th most abundant element, challenges lithium's 50-year energy storage monopoly. But can it truly deliver?

The PAS (Problem-Agitate-Solution) framework reveals alarming realities: Last month's lithium spot price volatility (18% swing in 72.

The Baochi Storage Station in Yunnan integrates lithium and sodium-ion technologies at scale, a global first, aiming to stabilize renewable energy and cut costs as China accelerates its energy transition. From ESS News China Southern Power Grid (CSG) announced on May 26 the commissioning of the.
