India Industrial Energy Saving and Storage Equipment Project

Overview

What are India's energy-saving projects?

India's energy-saving projects are diverse and span multiple sectors, from industrial and residential to transportation and agriculture. These initiatives contribute to reducing energy consumption, lowering emissions, and promoting sustainability in alignment with India's national and global commitments to combat climate change.

How much battery energy storage capacity is available in India?

Between 2022 and May 2025, India auctioned approximately 12.8GWh of battery energy storage system (BESS) capacity for both hybrid and standalone applications. However, only about 219MWh of BESS capacity is reported to be operational, leaving a large pipeline of projects under construction.

Why should India invest in a Bess storage facility?

With a significant increase in renewable energy generation capacity, it is imperative that storage facilities are developed to help India and the world transition to clean energy. With an annual tariff nearly 55% lower than the previous benchmark, the project sets a new standard for BESS affordability in India.

What is India one solar thermal energy storage system?

The India One Solar Thermal Energy Storage System is a 1 MW solar thermal power plant located in Abu Road, Rajasthan, India. It uses thermal energy storage to provide round-the-clock power. Commissioned in 2017, the project was designed, developed, and installed by Brahma Kumaris and the World Renewal Spiritual Trust (WRST).

What is India's energy storage policy?

India's policy landscape for energy storage is evolving rapidly. The government has introduced hybrid renewable and storage policies, along with

increased budget allocations for solar projects, including \$1.1 billion for grid-connected solar and funds for rooftop solar.

Can solar-plus-storage transform India's energy landscape?

As a long-term renewable energy partner in India, we recognize the immense potential of solar-plus-storage in transforming the country's energy landscape. We are actively exploring co-located solar and storage as well as standalone BESS projects to support energy security, grid reliability, and sustainable economic growth.
