Is slow charging good for lithium iron phosphate battery packs

Overview

Lithium batteries come in different types, the most common being lithium-iron phosphate batteries and ternary lithium batteries. Generally, the former is suitable for slow charging, while the latter is designed for fast charging.

Lithium batteries come in different types, the most common being lithium-iron phosphate batteries and ternary lithium batteries. Generally, the former is suitable for slow charging, while the latter is designed for fast charging.

Improper charging can shorten battery lifespan, affect performance, and in some cases, lead to overheating or failure. Following the right two-stage charging process 2 ensures optimal battery health and longevity.
