That's Japan for you – where secondary battery energy storage stations are becoming as common as vending machines selling hot corn soup. In this tech-savvy nation, these storage facilities aren't just backup power sources; they're the secret sauce in Japan's recipe for energy independence.

Tokyo, 12 June 2025 – Saft, a subsidiary of TotalEnergies, has been selected by leading Asian renewable energy developer Gurin Energy to supply a battery energy storage system (BESS) for the latter's major energy storage project being developed in Fukushima, Japan.

Why is Japan Interested in Battery Storage Now?

We've discussed how battery storage is gaining attention for its role in stabilizing the power from Japan's widespread solar panels. But why the focus on battery storage now, given Japan's long history with solar panels and other green energy sources?

The answer lies in recent changes.

As the grid gets smarter and the demand for clean energy surges, Japan is racing to ensure the power stays on — even when the sun isn't shining and the wind isn't blowing. Battery storage, once a backstage player, is now a critical piece of the country's energy puzzle.
