Maldives 2025 solar Panel Project

Overview

The Fari Islands in the Maldives are developing a mix of floating and ground-mounted solar installations expected to meet up to 50% of the archipelago's electricity demand on sunny days. The systems form part of a broader plan to expand renewable energy use across the four-island.

Projected to lose 80 percent of its land over the next few decades, the Maldives strengthened its commitment towards climate change and renewable energy targets when President Ibrahim Mohamed Solih announced the country's ambition to become net-zero by 2030 at the UN Climate Ambition Summit in.

Swimsol, Pontiac Land Group and Patina Maldives have expanded solar capacity at Fari Islands to 6.4 MW by adding floating and rooftop systems. Fari Islands project with Swimsol added 2,160-panel floating solar system supplying 24 percent of total energy. Image Source: Maldives Marketing and PR.

The government has announced plans to transition Raa Atoll Vaadhoo to 100 percent renewable energy by the end of 2025, positioning the island as a model for sustainable development within the country's broader energy transition strategy. The decision was revealed during a press conference held.

The Government of Maldives and APM SPV Pvt Ltd have today signed a landmark Investment Agreement for the development of the first 100-megawatt floating solar power project in the Maldives, to be established

under the Special Economic Zones (SEZ) framework, the first project to be granted permit.

The Maldives has announced a tender for the development of 1.5 MW of rooftop solar projects across 11 islands. This initiative, part of the World Bank-funded Accelerating Renewable Energy Integration and Sustainable Energy (ARISE) program, underscores the nation's commitment to renewable energy.
