Mauritius solar energy storage battery

Overview

Mauritius is accelerating its clean energy transition by opening a tender for solar projects with a combined capacity of 80 MW, including integrated battery storage systems. Does Mauritius need a battery energy storage system?

Mauritius aims to increase the share of renewable energy sources in its energy mix, which leads to fluctuating power injection. To reduce this fluctuation from variable renewable energy sources, the installation of Battery Energy Storage Systems (BESS) is required.

Does Mauritius use solar energy?

Mauritius has an attractive potential for solar energy, with an average annual solar radiation value of some 6 kWh/m²/day. Solar photovoltaic (PV) energy is an option due to the almost year-round intensive sunlight. To achieve the target of 60 percent renewable energy by 2030, Mauritius has commissioned six more solar farms.

How will Mauritius transition to a low carbon economy?

Mauritius is transitioning to a low carbon economy, with the Central Electricity Board (CEB) installing the first grid-scale Battery Energy Storage System (BESS). This is the first of its kind in Mauritius and enables high capacity storage of renewable energy in the grid.

What is Mauritius' long term energy strategy?

The Government of Mauritius' Long Term Energy Strategy 2009-2025 aims to increase the share of renewable energy in our energy mix to 35% by 2025. This includes reducing the country's dependence on coal and heavy oil for electricity generation.
