

Kongres Container

Nepal DC panel inverter structure

Standard 20ft containers

Standard 40ft containers

Overview

What are the different types of solar inverters?

After the energy conversion, solar electricity can power all the appliances and electronics. If the solar panels produce more electricity than required, it goes back into the grid. There are mainly three types of solar inverters — string inverters, micro-inverters, and power optimizers. All these inverters have a different system.

Can you buy solar equipment in Nepal?

Nevertheless, equipment sales in Nepal are currently limited to individual households. Still, you don't need to worry if you need equipment for a large-scale solar project. Nepal has several ports that facilitate direct shipping of solar equipment from established solar markets such as China and the USA.

How do solar inverters work?

Solar inverters convert the direct current (DC) output of panels to the alternating current (AC) on which most residential and commercial appliances run. In short, the inverters work as the mediums between the solar panels and the residential and commercial buildings' electrical setup.
