# New Zealand outdoor power generation

## Overview

---

When did New Zealand start generating electricity?

It began over 55 years ago with the opening of the Wairakei power station in November 1958. Most of New Zealand's installed capacity is situated in the Taupo Volcanic Zone. Geothermal generation is around 15% of New Zealand's electricity generation. Wind generation has grown quickly as a source of electricity in New Zealand.

What is the most common renewable system for on-site electricity generation in New Zealand?

By far the most common renewable system for on-site electricity generation in New Zealand is a photovoltaic grid-connected system. Properties can generate their own electricity from renewable sources such as photovoltaics, wind, and hydro. On this page:

What percentage of New Zealand's electricity is produced by wind farms?

ine here will produce electricity for about 90% of the time. The geographic dispersion of wind farms results, over ll, in a less variable supply of wind generated electricity. At the moment, a large portion of New Zealand's wind generation is concentrated in the Lo.

What percentage of New Zealand electricity comes from renewable sources?

On this page: Around 69% of New Zealand residential energy use is electricity and approximately 85% of electricity comes from renewable sources, including hydro, geothermal, wind and solar. In other words, if you buy electricity from the national grid, most of your electricity already comes from renewable sources.

Is wind power a viable option in New Zealand?

With most of New Zealand's land receiving ideal wind speeds, wind power generation is a highly viable option. We offer complete services, from

measuring your site's wind speeds to supplying and installing the latest wind turbine technology.

How does New Zealand generate electricity?

Electricity generation from the combustion of coal, oil, and gas provides baseload, backup and peaker electricity supply. Generation from these fuels is around a quarter of New Zealand's electricity generation. Most of New Zealand's thermal plants are found in the North Island, close to domestic coal, oil, and gas resources.
