North Asia Mobile Base Station Communications

Overview

What is a communication base station?

Communication base stations are an essential element in providing a stable communication environment for mobile communication devices such as mobile phones and smartphones. The installation of 5G base stations and compact base stations (small cells) in areas where signals are congested is presently proceeding apace.

What is a mobile base station?

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN). The base station connects mobile devices to the network and routes them to other terminals in the network or to the core network of a mobile operator. Read more [Explore Mobile base](#).

Why is construction of mobile communication base stations important?

The construction of mobile communication base stations is an important part of the investment of mobile communication operators, and is generally carried out around factors such as coverage, call quality, investment benefits, construction difficulty, and maintenance convenience.

What is a micro base station?

A micro base station is mostly used in cities with a small coverage distance, generally 1-2 km, and directional coverage. A micro-micro base station is mostly used for blind spot coverage in urban hotspots. Generally, the transmission power is very small and the coverage distance is 500m or less.

What will the future of base stations look like?

In terms of composition architecture, various base stations will become open modular products: in terms of technology, future base stations will develop in the direction of higher integration, full IP, multi-carrier and more efficient

digital power amplifier.

What is a distributed base station?

Distributed base stations divide traditional macro base station equipment into two functional modules according to their functions. The baseband, main control, transmission, clock and other functions of the base station are integrated into a module called baseband unit BBU (Base Band Unit).
