Outdoor Micro Base Station Huawei

Overview

What is Huawei base station backhaul microwave?

Based on leading wireless, transmission, and datacom technologies, Huawei base station backhaul microwave solution provides fiber-level broadband wireless backhaul capabilities, ultra-low latency, fully modular architecture design, and co-site integration with wireless networks.

What is the difference between a wireless base station and a microwave base station?

Wireless base stations are widely distributed, and the backhaul network requires high quality. The wired transmission of base stations requires high construction costs, long construction period, and high O&M costs. Microwave transmission is fast in network construction and provides a carrier-class availability of up to 99.999%.

What is a macro base station?

This outdoor macro base station supports both GSM-R and LTE — the ideal solution for railways that want to prepare for evolution to an LTE broadband network.

What is coordinated delivery of base stations & microwave devices?

Coordinated delivery of base stations and microwave devices supports fast base station deployment and service provisioning. 10 Gbit/s to-site large broadband backhaul, TDM/IP multi-service interfaces, 50 microsecond ultra-low latency, meeting 5G-oriented base station backhaul requirements.
