Papua New Guinea Power Plant Lithium Energy Storage Project

Overview

In Papua New Guinea, several energy storage projects are currently underway: A solar and battery energy storage system (BESS) minigrid is being developed on the island of Buka, which aims to enhance energy access in the region². The project includes a 1 MW solar array and a 2 MW/2.5 MWh lithium-ion battery energy storage system, designed to provide reliable electricity³. Additionally, the Lāwa'i Solar and Energy Storage Project consists of a 28 MW solar photovoltaic (PV) system paired with a 100 MWh energy storage system, showcasing a significant investment in renewable energy⁴. These initiatives reflect Papua New Guinea's commitment to increasing access to renewable energy and improving the reliability of its electric supply. [pdf]
