Portugal container power generation prices

Overview

The Portugal power market is segmented by power generation, transmission, and distribution. By power generation, the market is segmented into thermal, hydro, renewable, and others.

The Portugal power market is segmented by power generation, transmission, and distribution. By power generation, the market is segmented into thermal, hydro, renewable, and others.

The Portugal Power Market size in terms of installed base is expected to grow from 28.08 gigawatt in 2025 to 38.96 gigawatt by 2030, at a CAGR of 6.77% during the forecast period (2025-2030). Portugal Power Market expansion is propelled by record-low auction tariffs for solar photovoltaic (PV).

The focus on energy transition is supported by the European Union's Green Deal, which provides funding for renewable energy projects, grid upgrades, and energy efficiency improvements. Together, these trends indicate a robust shift toward sustainability, innovation, and greater energy independence.

An end-user's bill in Portugal combines energy costs, network tariffs, and taxes/fees. In the liberalized market each supplier sets the energy price (based on wholesale and contract terms), whereas in the old regulated regime the "tarifa de energia" and "tarifa de comercialização" were fixed by.

Data is now available through the .Stat Data Explorer, which also allows users to export data in Excel and CSV formats. Wholesale electricity prices declined further in many countries in 2024, following the sharp contractions in 2023. This downward trajectory largely tracked the fall in global.

Wholesale power prices on the Iberian Peninsula have plunged well below the rest of Europe amid a surge in generation from renewable technologies, according to data collated by Ember. In March, prices dipped to just €19.26 per megawatt hour (MWh) in Portugal as renewables covered 91% of the.

Electricity and gas prices are around 20 to 30% below the EU average. The price of petroleum products is close to the EU average. The share of

renewables in the energy mix has increased by 14 points since 2010, reaching 39% in 2023. Portugal aims to strengthen its electricity grid to integrate more. What is power generation in Portugal?

Power generation can be described as the production of electricity using different types of technology, like thermal, solar, wind, hydro, nuclear, etc. The Portugal power market is segmented by power generation, transmission, and distribution. By power generation, the market is segmented into thermal, hydro, renewable, and others.

How is the Portugal power market segmented?

The Portugal power market is segmented by power generation, transmission, and distribution. By power generation, the market is segmented into thermal, hydro, renewable, and others. For each segment, the market sizing and forecasts have been done based on installed capacity (gigawatts), except transmission and distribution.

What is the growth rate of the Portugal power market?

The Portugal Power Market is growing at a CAGR of greater than 3% over the next 5 years. Acciona SA, Finerge SA, Iberdrola SA and Energias de Portugal are the major companies operating in this market.

How much does electricity cost in Portugal?

In March, prices dipped to just €19.26 per megawatt hour (MWh) in Portugal as renewables covered 91% of the country's electricity needs, while in neighbouring Spain, prices averaged €20.28/MWh and the share of renewables stood at 68% — a monthly record.

Who are the key players in the Portugal power market?

The Portugal Power market is consolidated, due to a few companies holding a major share of the market. The key players in this market (in no particular order) include Acciona SA, Aquila Group, Finerge SA, Iberdrola SA, and Energias de Portugal. Need More Details on Market Players and Competitors?

.

How is energy trading facilitated in Portugal?

Portugal's energy trading activities are facilitated through various platforms,

each catering to different segments of the market: OMIP (The Iberian Energy Derivatives Exchange): OMIP provides a marketplace for trading electricity derivatives, including futures, swaps, and options, covering both Portugal and Spain.
