Price of solar panels after installation

Overview

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

With utility rates rising and the 30% solar tax credit going away at the end of the year, installing solar in 2025 offers more cost-savings potential than ever before. So, what’s standing in the way of American homeowners and solar panels?

The biggest hurdle is often the perceived “upfront cost” of.

Installing solar panels can be one of the most impactful improvements you can make - allowing you to take control of electricity bills, protect your home from outages and increase the value of your property while producing energy directly on the roof. How much does it cost to install and manage.

Who are the best solar installers in New York?

Cost: About \$5,180 for a 2 kW system to \$15,540 for a 6 kW system after tax credit. Savings: 7 year payback; about \$22,120 saved over 20 years. Environmental benefits: Potential to reduce your carbon emissions significantly. Going solar in New York now.
