Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

This article targets professionals who need actionable data on energy storage costs, whether for grid-scale projects, solar+storage hybrids, or portable systems. Spoiler: lithium-ion still rules, but iron is sneaking into the party ☐☐. 1. The Big Three: Batteries, Inverters, and Balance of System.
