Solar panel price fluctuations

Overview

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024.

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024.

For decades, one of the near-constants in the shift to renewable energy was that solar panel prices were decreasing. This downward curve hit a bump in 2020. Global prices began to rise, largely due to supply disruptions resulting from the COVID-19 pandemic. At the time, analysts said the price.

One of the most transformative changes in technology over the last few decades has been the massive drop in the cost of clean energy. Solar photovoltaic costs have fallen by 90% in the last decade, onshore wind by 70%, and batteries by more than 90%. These technologies have followed a “learning.

If you’ve been eyeing a rooftop solar setup, you’ve probably noticed something strange — solar panel prices never seem to stay still. One month you hear they’ve dropped, and the next, they’re back up again. It’s like trying to predict the weather in April — tricky, and full of surprises. In 2025.

Quotes for rooftop solar projects are averaging \$28,750 before incentives, said the marketplace operator. Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform.

Global demand, raw material costs, and transportation logistics all impact solar panel price. Market trends, such as tariffs or shipping delays, can cause price fluctuations. 13. Bulk Purchase or Community Solar Options Buying in bulk or joining a community solar initiative can reduce per-panel.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW. Why did solar panels cost lower in 2024?

EnergySage said the lower quoted installation prices largely came from lower equipment costs. Wood Mackenzie reported solar panel prices dropped 30% year-over-year in 2024. Prices may have also lowered due to softened demand, said EnergySage. Residential solar installations declined 31% in 2024.

Are residential solar prices falling?

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024.

How have solar panels cost and efficiency changed over time?

Let's take a look at how solar panel cost and efficiency have changed over time. Solar panels are about 60% cheaper and 40% more efficient than they were in 2010. Solar panels in 2010 cost about \$8.70 per watt and were about 15% efficient. Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient.

How much do solar panels cost per watt?

Solar panels in 2010 cost about \$8.70 per watt and were about 15% efficient. Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient. The price of solar panels could continue to drop, but it can depend on technology, market conditions, and government policies and programs.

How much does a solar panel cost in 2025?

We also consider these data points in our solar panel scoring criteria. In 2025, the average cost of a solar installation is about \$19,000, or \$3.00 per watt, before any incentives are factored in. The industry standard for efficiency is between 19% and 22%, but we're beginning to see more panels with efficiency ratings above 22%.

How has the solar market changed over the past year?

Many installers report a rocky start to the year. In H1 2025, capacity decreased year-over-year in 33 states, resulting in a 12% contraction compared with H1 2024. The residential solar market has struggled over the past few years, primarily due to sustained high interest rates.
