# Solar panels that generate solar power

## Overview

---

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect." How do solar panels generate electricity?

Solar panels generate electricity through the photovoltaic effect, where sunlight knocks electrons loose in a semiconductor material, creating a flow of direct current (DC). 2. What components are needed for a solar power system?

.

What is solar energy & how does it work?

Solar energy is a renewable, sustainable, and increasingly popular way to generate electricity for homes, businesses, and off-grid applications. This guide provides an in-depth overview of how solar panels work, the key components of a solar power system, and practical advice on installation, maintenance, and troubleshooting.

How do solar power systems transform energy production?

Solar power systems have transformed energy production by providing a sustainable and cost-effective alternative to traditional power sources. Among these, photovoltaic systems stand out for their efficiency and versatility, transforming sunlight into power directly through solar panels.

What is a solar photovoltaic panel?

A bi-directional device that sends and receives power from the electricity grid. They are optional. Useful when the panels do not receive sunlight, but also one of the most expensive items. SEE INFOGRAPHIC: How do solar photovoltaic panels work?

.

What is a solar power system?

A solar power system is made up of a variety of components that turn sunlight into useful electricity. Photovoltaic (PV) panels are at the heart of any system, absorbing sunlight and converting it into direct current (DC) power.

How do solar panels convert sunlight into electricity?

The process of converting sunlight into usable electricity involves six key steps: When sunlight hits a solar panel, photons penetrate the anti-reflective coating and enter the silicon photovoltaic cells. Not all photons are absorbed—some reflect off the surface or pass through the material.
