Wide Temp:
-20°C to 55°C

Overview

You can expect to pay between \$6 and \$50 to fully charge your Tesla at a Supercharger station, excluding any fees. Superchargers have an average rate of \$0.25 per kilowatt-hour, but rates vary between locations.

You can expect to pay between \$6 and \$50 to fully charge your Tesla at a Supercharger station, excluding any fees. Superchargers have an average rate of \$0.25 per kilowatt-hour, but rates vary between locations.

We designed the Supercharger network to enable a seamless, enjoyable road trip experience. Therefore, we've heard you and understand that it can be frustrating to arrive at a station only to discover fully charged vehicles occupying spaces. We envision a future where vehicles move themselves once.

The Supercharger Cost Calculator will allow you to select a variety of sockets and determine what type of charger you will be charging with (Level 1 or 2). The calculator will allow you to compare charging costs, and will answer the question of where it is more profitable to charge your Tesla at.

When you pull up to a Tesla Supercharger, your cost depends on a few things: Right now, you'll typically pay between 25¢ and 50¢ per kWh in the US, though prices climb higher in some busy areas. Nothing beats plugging in at home. The average home electricity rate hovers around 15¢ per kWh – way.

EV charging infrastructure is costly, especially when it comes to DC fast-charging equipment. It's often the case that a single DC fast-charging stall comes with a six-digit bill, but it might not have to be like that. Tesla's Director of Charging North America, Max de Zegher, recently replied to a.

You can expect to pay between \$6 and \$50 to fully charge your Tesla at a Supercharger station, excluding any fees. Superchargers have an average rate of \$0.25 per kilowatt-hour, but rates vary between locations. The total cost to charge your Tesla using the Supercharger network will vary depending.

EnergySage partners with Qmerit, the EV charger installer trusted by BMW,

Ford, Tesla, and others to provide you with an instant estimate for fast, reliable at home charging. Depending on the model, it costs between \$9.62 to \$18.30 to fully charge a Tesla. Teslas have a unique charging port and. How many Tesla Supercharger stations are there?

There are nearly 2,000 Tesla Supercharger stations across all 50 states, with over 20,000 charging stalls. Tesla vehicles make finding your nearest charging station a breeze. Teslas have a built-in Trip Planner that works just like a regular GPS system, but it maps out routes that pass by Supercharger stations on the way to your destination.

How do Tesla Supercharger fees work?

Standard Supercharger fees apply after free Supercharging credits are used. The idle fee is a protocol used to ensure as many Tesla drivers can utilize Supercharger stalls quickly and efficiently. It works by charging a fee to any EV occupying a Supercharger with a complete charging session, if the station is at least 50% full.

What is a supercharger cost calculator?

The Supercharger Cost Calculator will allow you to select a variety of sockets and determine what type of charger you will be charging with (Level 1 or 2). The calculator will allow you to compare charging costs, and will answer the question of where it is more profitable to charge your Tesla at home or at charging station networks.

Is supercharging cheaper than a gas station?

Supercharging can often be cheaper than stopping at a gas station. However, savings ultimately depend on the Supercharger's rates and local gas prices.

How are supercharging costs billed?

Supercharging costs and fees will be billed to the Supercharging payment method you've selected in the Tesla app. If Tesla is unable to automatically bill a stored payment method, you will be billed for any idle or congestion fees incurred at your next Service Center visit. Contact the Customer Support team for any questions.

How do supercharger rates work?

It's important to know that there are a few different ways the rates could be

set up at a Supercharger: Per kWh charging: This is the most common type of Supercharger rate, where you are billed for every kilowatt-hour of energy used to charge your battery. Per minute charging: Some Superchargers may bill you based on how long you are charging for.
