# Two inverters connected to two sets of batteries

## Overview

---

Connecting two inverters to the same battery is easy. But there are some extra calculations and considerations we need to do.

Can two inverters connect to the same battery bank?

It is possible to connect two inverters to the same battery bank. Either you choose inverters that can communicate with each other or you have two separate inverters powering a different load. Never connect the output of two separate inverters. How many batteries can be connected in parallel to an inverter?

.

Should you connect a battery to an inverter in parallel?

Many people prefer to connect batteries and inverters in parallel. This is because there is less limitation on how many batteries you can connect to your inverter at once. The other thing to consider is your battery charger. The bigger your battery capacity and overall amperage, the more powerful your battery charger needs to be.

How to choose a battery inverter?

**Inverter type:** Ensure that the selected inverter supports multiple inverters connected in parallel to the same battery system. **Communication protocols:** Inverters often need to communicate with the battery for effective energy management. Make sure the two inverters can work together and avoid conflicts.

How do you connect a battery to an inverter?

**Attach the inverter's positive cable** to the positive terminal of one of the batteries. **Connect the inverter's negative cable** to the negative terminal of the same battery. **Check Connections:** Ensure all connections are secure and tight. **Test the System:** Turn on the inverter and check if it's drawing power from both batteries.

How many batteries can I connect to my inverter?

There is no set limit to how many batteries you can connect to your inverter. But you must understand how you connect your batteries together affects what you can and can't do! For example, connecting your batteries in series will be different to connecting in parallel.

Can a 12V inverter be connected to a 24v battery?

Let's say you have a 12V inverter and try to connect two 12V batteries in series. You would end up inputting 24V to the inverter and cause an overload. This could cause damage to your equipment, at the very least your inverter will shut down to protect itself.
