# U S stacked energy storage battery imports

## Overview

---

Since 2021, the US has imported over \$100 billion in electric storage batteries and components, reaching record heights in 2024, according to the S&P Global Market Intelligence Global Trade Analytics Suite.

Since 2021, the US has imported over \$100 billion in electric storage batteries and components, reaching record heights in 2024, according to the S&P Global Market Intelligence Global Trade Analytics Suite.

New analysis from Clean Energy Associates (CEA) and Wood Mackenzie highlights the challenges facing the US battery storage market due to trade tariffs. According to research firm Wood Mackenzie's new report, 'All aboard the tariff coaster: implications for the US power industry,' tariffs on imports.

While the U.S. is investing heavily in domestic gigafactories and lithium mining projects, the reality in 2024–25 is clear: America still relies on imports for most of its lithium batteries. These fall under HS Code 850650, which specifically covers primary lithium cells and batteries (excluding.

US imports of various types of batteries and related parts for energy storage systems, electric vehicles, consumer electronics and other uses have soared this decade, especially lithium-ion batteries made in China. Since 2021, the US has imported over \$100 billion in electric storage batteries and.

US imports of lithium-ion batteries remained higher than a year prior, but volumes declined from April as tariffs weighed. Imports of lithium-ion batteries totaled 74,462t in May, up 12pc from a year earlier but down 27pc from April, according to customs data. Following the Geneva agreement in May.

New analysis from Clean Energy Associates (CEA) and Wood Mackenzie highlights the challenges facing the US battery storage market due to trade tariffs. Unlike other storage conferences, proceeds from the event help to fund high quality journalism across our media titles. This supports the growth of.
