At-home solar is booming across the United Kingdom — and it's about to get even easier for homeowners to plug in. Nearly 100,000 rooftop solar systems were installed in the U.K. in the first half of 2025, a 22% increase from the same period last year, according to the Microgeneration Certification.

Recently released statistics from the Department for Energy Security and Net Zero (DENZ) show that, in August 2024, the UK's solar photovoltaic capacity surpassed an astonishing 16GW. But what has this progress looked like over the last 14 years?

Did domestic installations increase steadily, or was.

Increased demand for renewable energy sources to help decrease reliance on traditional fuels and reduce carbon footprints, coupled with supportive government policies, has led to increased solar panel adoption across the UK. Solar power is clean, cheap, and renewable, and it can offer significant.

Building regulations in England support growth in demand for rooftop solar as new-build properties make up significant share of small-scale PV installations.

Strong installations in first quarter of 2025 were followed by a new single-day record for UK solar generation in April. New buildings.

The UK has installed more solar power systems in 2023 than in all of 2022, according to data from the Microgeneration Certification Scheme (MCS). A domestic solar installation. Image by Kindel Media via Pexels The UK has installed more solar power systems in 2023 than in all of 2022, according to.
