Uninterrupted power supply to the Andorra base station computer room

Overview

What is an uninterruptible power supply for server room use?

An uninterruptible power supply for server room use is a backup power solution that kicks in instantly when the main power source fails or fluctuates. It bridges the gap between a power outage and the switchover to a backup generator or safe shutdown.

Why do you need an uninterruptible power supply (UPS)?

Power outages and electrical fluctuations can cause serious disruptions, whether you're working from home, running a business, or using a gaming PC. An uninterruptible power supply (UPS) helps prevent sudden shutdowns, data loss, and hardware damage by providing backup power when your main electricity fails.

How do I size a room for an uninterruptible power supply?

The most important factor in sizing a room for an Uninterruptible Power Supply is space around the equipment. You need to provide room for air to circulate and ventilation, as well as for manoeuvring around for generator maintenance and servicing.
