What are the low-carbon energy storage systems

Overview

TES technologies offer flexible, low-carbon solutions across multiple industrial scenarios, from direct steam generation and surplus heat recovery to backup systems and electrification. What is compressed carbon dioxide energy storage (CCES)?

They are now characterized as large-scale, long-lifetime and cost-effective energy storage systems. Compressed Carbon Dioxide Energy Storage (CCES) systems are based on the same technology but operate with CO₂ as working fluid. They allow liquid storage under non-extreme temperature conditions.

What is compressed air energy storage (CAES)?

Compressed air energy storage (CAES) processes are of increasing interest. They are now characterized as large-scale, long-lifetime and cost-effective energy storage systems. Compressed Carbon Dioxide Energy Storage (CCES) systems are based on the same technology but operate with CO₂ as working fluid.

Which CCES is best for storing CO₂ at low pressure?

Scheme of the CCES with low-pressure stores studied by XSun et al. The best RTE and η_{ex} are obtained by CCES storing CO₂ in a gas state at low pressure [66, 78, 79]. In particular, the AA-CCES examined by Astolfi et al. which is a CCES proposed by an Italian company specialized in this system.

Does liquid air energy storage remove carbon dioxide?

The carbon dioxide removal potential of Liquid Air Energy Storage: A high-level technical and economic appraisal. *Frontiers of Engineering Management*, 8 (3): 456–464 Luo X, Liu X J, Liu Y F, Liu J P, Wang Y X (2021). Benefit-based cost allocation for residentially distributed photovoltaic systems in China: A cooperative game theory approach.

Which CCES configuration is best for storing CO₂ below ambient temperature?

The most studied CCES configurations are AA-CCES storing CO₂ below ambient temperature in the low-pressure tank. Most of them have a RTE within the range (50%–60 %). The reported studies have shown a great variety of configurations (carbon capture, polygeneration, low-pressure stores, Rankine based cycle, etc) which can be suitable.

Why do we need compressed air energy storage?

To increase the share of electricity generation from renewable energies for both grid-connected and off-grid communities, storage systems are needed to compensate for their intermittent nature. Compressed air energy storage (CAES) processes are of increasing interest.
