# What is the service life of a household energy storage cabinet

## Overview

---

A typical residential energy storage system has a lifespan of 1. 5 to 15 years, 2. influenced significantly by usage patterns, 3. varying depending on technology type, and 4. affected by environmental conditions. How long do battery storage systems last?

Let's take a look at the average lifespan of battery storage systems and how to maximise their life expectancy. When it comes to the longevity of battery storage systems, you can generally expect them to last between 10 and 12 years. That said, some premium models can keep going for up to 15 years or even longer with the right care and maintenance.

How many cycles a day should a battery storage system run?

A quality battery storage system should be able to manage 6,000 to 10,000 cycles before you start to see a dip in its capacity. At one cycle a day, that's roughly 15 years plus. It's worth noting that the frequency of cycles you get through varies depending on the energy consumption patterns of your home.

How long do solar batteries last?

That said, some premium models can keep going for up to 15 years or even longer with the right care and maintenance. With batteries compatible with or without solar panels, you can expect the same sort of lifespan with solar battery storage too.
