# Where is solar energy storage suitable

## Overview

---

Sometimes energy storage is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone, but in either configuration, it can help more effectively integrate solar into the energy landscape.

Sometimes energy storage is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone, but in either configuration, it can help more effectively integrate solar into the energy landscape.

The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time.

The article focuses on the successful implementation of solar energy storage systems in urban areas, highlighting key aspects such as efficiency, scalability, integration with existing infrastructure, and environmental impact. It examines how solar energy storage functions in urban environments.
