Zinc-bromine energy storage equipment

Overview

A zinc-bromine battery is a system that uses the reaction between metal and to produce , with an composed of an aqueous solution of . Zinc has long been used as the negative electrode of . It is a widely available, relatively inexpensive metal. It is rather stable in contact with neutral and alkaline aqueous solutions. For this reason, it is used today in and primaries.

A zinc bromine battery is a rechargeable battery system used in a range of energy storage systems and renewable energy operations. Both flow and non-flow zinc-bromine batteries offer distinct advantages over lithium-ion batteries. The battery materials are low cost and readily available.
